ABSTRACT

Statistical data for the period 1950-1965, with some data up to 1967, are examined for implications for educational development of the rapidly expanding school-age population in Asia. The quantitative aspects of educational progress comprise the bulk of the review, with qualitative factors discussed in context with future planning. Numerous tables present information on population, area, illiteracy, educational attainment, enrollment, teaching staff, educational institutions, and educational expenditures in Japan and in the 18 countries which have instituted the Karachi Plan for universal compulsory education. A bibliography of documents available at the United Nations Educational, Scientific, and Cultural Organization's Regional Office of Education in Asia concludes the report. (PD)

CORRIGENDA

1) The figures for Ceylon in Table A 23 on page 137 concerning the pupil-teacher ratio of primary education should be replaced by the following:

1950	35
1955	33
1960	31
1964	28

These figures cover pre-primary and primary education at the first level, as well as general and vocational education at the second level. Separate data on primary and secondary level are not available.

2) In Table A 20 on page 128, the data given for the first level include figures for preprimary and primary, as well as general and vocational secondary education.

Published by the Unesco Regional Office for Education in Asia Bangkok, Thailand, 1969

Any opinion which may have been given or implied in this publication is not to be taken as necessarily representing the official views of Unesco. No opinion is intended concerning the legal status or delimitation of the frontiers of any country or territory.

The Unesco Regional Office for Education in Asia published in 1966 a Review of Educational Progress in the Asian Region (Bulletin, Vol. I, No. I, September 1966) with statistical data on education in the region up to 1963. The present review presents statistical data covering the period 1950-1965 and, where data were available, the period up to 1967.

The review is in three parts: Part I is a summary analysis of the main magnitudes of educational progress, and Part II consists of 31 statistical tables. A selected list of documents containing educational statistics which were used in the preparation of the review comprises Part III.

Statistical tables presented in Part II of the review are distinguished from statistical tables which accompany the text by prefixing A to each table number (page 65 onwards).

Data relating to Japan are included only in those statistical tables in Part II which present data for individual countries. The first part of the review and the statistical tables therein, as well as the regional aggregates (pages 65-68), are limited to Member States which are participating in the Karachi Plan for universal compulsory education; namely, Afghanistan, Burma, Cambodia, Ceylon, Republic of China, India, Indonesia, Iran, Republic of Korea, Laos, Malaysia, Mongolia, Nepal, Pakistan, Philippines, Singapore, Thailand and Republic of Viet-Nam.

The omission of a country's name in a table, or the appearance of the symbol of "data not available" (...) against the name of the country, does not necessarily signify that the data do not exist, but that they were unavailable to the Regional Office at the time the review was prepared.

In a publication of this nature which seeks to bring together data from a variety of sources, some discrepancies are unavoidable, while possible improvements will doubtless suggest themselves to the careful reader. The Regional Office will receive with appreciation additional information, as well as suggestions for improvement or for correcting any errors of omission or commission. All information may be sent to Unesco, P.O. Box 1425, Bangkok, Thailand.

Part I

REVIEW OF THE PROGRESS OF EDUCATION IN THE ASIAN REGION

Introduction

Population

The 1967 population of the Asian region $\frac{1}{}$ is estimated at 985 million. It is growing at a rate of over 25 per cent every ten years, and more than 40 per cent of the population are under 15 years of age. The demographic studies of the United Nations $\frac{2}{}$ on the present levels and future trends in mortality, fertility and population growth indicate that the rapid population increase in the region is likely to continue at the present pace up to, and probably beyond, the year 2000.

Member countries of the Asian region have established a common goal of providing at least seven years of free and compulsory education to all children 3. The enormity of the task, in enrolment alone, becomes readily apparent by making a simple projection. The population of the region was 824 million in 1960. Should it continue to grow at just 25 per cent every decade, it would reach 1 288 million in 1980, and 2 012 million by the year 2000. If there were about 330 million children under the age of 15 in 1960, there could be 805 million in the year 2000. Ten years after that, or four decades from now, the total population under 15 years of age would approach 1 006 million.

The rapid population increase is the result of large reductions in mortality in most countries of the region, while fertility has remained almost constant, and at a high level. The crude death rate for the period 1960-67 is estimated at 17 per thousand population, compared with 10 and 9 per thousand for Europe and Northern America respectively over the same period. The downward trend in mortality has continued and it may not be long before most countries attain levels in expectation of life comparable to those of more advanced regions. The reduction in the levels of mortality which has already taken place in the developing countries within a relatively short period is without parallel in demographic history. There are countries in the region, such as Ceylon and the Republic of China, which have added, since the pre-war years, nearly twenty

^{1/} In this and subsequent references, regional aggregates include countries participating in the Karachi Plan and do not include Japan (see preface).

^{2/} Bibliographical references are found in Part III, beginning on page 192.

³/ This is discussed in detail in the section on the Karachi Plan.

years to the expectation of life at birth. Because of the young age structure, the crude death rate in some developing countries is now even lower than that of the more advanced countries.

The crude birth rate during the period 1960-67 is estimated at 42 per thousand population, more than twice as high as the rates for Europe and Northern America (19 and 21 per thousand, respectively). Although there are large gaps in present information on the levels and patterns of fertility in Asian countries it appears that population growth has become a function of fertility only. Despite the increasing attention being devoted to problems of population policy, however, no substantial reductions in fertility are expected to take place within the next few years.

It is of interest to note that according to a report \(\frac{1}{\sqrt{}} \) of the United Nations Economic Commission for Asia and the Far East (ECAFE), the following ten countries of the Asian region either are operating programmes in family planning; or have officially decided to do so: Ceylon, the Republic of China, India, Indonesia, Iran, the Republic of Korea, Malaysia, Nepal, Pakistan and Singapore.

Table 1 shows the current differences in the levels of fertility, mortality and population growth among major regions $\frac{2}{}$ of the world.

Table 1. Crude birth and death rates, and annual rate of population increase, selected regions, averages for 1960-67

Region	Birth rate (per thousand)	Death rate (per thousand)	Annual rate of population increase (%)
Europe	19	10	0.9
Northern America	21	9	1.4
Africa	46	22	2.4
Latin America	40	12	2.9
Asian region	42	17	2.5

^{2/} In this and subsequent tables, the classifications of major regions, except for the Asian Region, refer to those used in the Unesco Statistical Yearbook.

Table 2 presents population projections for different regions of the world. A notable feature of the developing regions, including Asia, is the large proportion of population in the school-age group. In 1960, about 43 per cent of the total population in the Asian region was in the age group 5-24 years, compared with 31 per cent for Europe and 34 per cent for Northern America. While in the developed regions the proportion of population in the age group 5-24 years shows a downward trend, in the developing regions it is on the increase.

Table 2. Total population, percentage in age group 5-24 years and decennial rate of increase, selected regions, 1960, 1970 and 1980

Region	Year	Total population (millions)	Percentage in age group 5-24	Decennial rate of increase, 1950-80 (in percentage)
Europe	1960	425	31.3	8.4
	1970	454	31.9	6.9
	1980	479	30.3	5.6
Northern America	1960	199	33.6	19.6
	1970	227	37.3	14.2
	1980	262	35.9	15.4
Africa	1960	273	45.2	23,2
	1970	346	45.3	26.8
	1980	449	45.4	29.8
Latin America	1960	212	43.6	30.9
	1970	283	44.2	33.3
	1980	378	44.9	33.6
Asian region	1960	824	43.1	25.4
C	1970	1 064	45. 3	29.2
	1980	1 370	45.7	28.7

The implications for educational development of a rapidly expanding school-age population are evident. The developing regions have to devote an increasing share of their limited resources to creating additional educational facilities for the new population even while they must endeavour to clear the backlog of illiteracy and inadequate schooling. Free from this pressure, the developed countries are able to allocate resources to extending the scope of education while maintaining an almost constant level of educational expenditure in relation to national income.

As a drastic illustration of this point, the data for Japan are reproduced on the next page.

	Total enrolm	ent, all levels	Enrolment ratio	Public expenditure
Year	Number (thousands)	As % of total population	(%) 1/	in education as % of national income
1950	18 675	22.5	99.5	4.8
1955	21 319	24.0	99.9	6. l
1960	22 440	24.1	99.9	5.1
1965	21 907	22.4	99.8	5.8
1966	21 405	21.7	99.8	5.7

1/ Compulsory education, i.e., grades I-IX, age group 6-14.

Educational attainment and literacy

Data on educational attainment and literacy are generally sparse. The data which are available have to be interpreted subject to a variety of limitations arising from differing classifications, definitions and reference periods. They are particularly not amenable for use in making inter-country comparisons. Despite these limitations, certain salient features of the situation in the region can be identified.

At around 1960, it is estimated that there were more than 300 million illiterates in the Asian Region. Estimates for around 1950 and around 1960 indicate that, although the actual number of adult illiterates has increased slightly, from about 307 to 315 million, the illiteracy rate has been considerably reduced, from about 76 per cent to about 67 per cent.

Table A 4 (see page 71) presents data on the number of illiterates and percentage of illiteracy by sex, in the population 15 years and over \(\frac{1}{2} \). Despite the reduction in illiteracy achieved in every country during recent years, seven countries still have illiteracy rates of over 70. There is a large disparity, reaching over 30% in some cases, in the literacy rates for men and women. In the region, just 5 countries have illiteracy rates for men of over 70 per cent, while 11 countries have over 70 per cent illiteracy rates for women. In the absence of widespread and sustained programmes of adult literacy, the literacy level of the population is largely determined by the development of schooling facilities. There is therefore to be found a close correlation between literacy rates by age-groups (estimates presented in Table A 5) and enrolment ratios over a period of time (Table A 10). Exceptions to this generalization are

^{1/} In Tables A 4 and A 5, the data for some countries indicated in the Tables are based on estimates (see also footnotes to the Tables).

provided by countries which have carried out extensive programmes of adult literacy, for example Indonesia and Mongolia. Indonesia, in particular, seems to have waged a strong literacy campaign also in the school-age groups, particularly the age group 10-19, since illiteracy ratios are low despite a relatively low enrolment ratio.

Table A 6 (p. 77) shows such data as are available on educational attainment of the population 25 years and over. The general picture which emerges is characterized by the very low proportion of the population with post-primary education. Those with complete secondary education form less than 5 per cent of the total population in nearly every country. Population with higher education is one per cent or less of the total population except in the Republic of China (3.3 per cent) and the Philippines (3.5 per cent).

Data on education by economic sectors are available for only a few countries in the region. They are presented for four countries in Table 3 below. The general situation in these countries is not unlike the conditions found in many other countries in the region at corresponding levels of educational development. Strikingly illustrated in these data is the heavy weight of illiteracy and inadequate schooling in the agricultural sector and occupations closely connected with agriculture.

The educational structure

For interpreting the aggregate data presented in this review it is necessary to bear in mind that the national education systems in the region vary in their structures and the levels and stages in which they are divided. Data relating to enrolment, output, retention rates etc. have to be seen in the context of these variations in the educational structure.

The usual or legal age at which children are admitted to formal schooling differs, but the most common ages of entry are 6 years (12 countries) and 7 years (four countries). 1/ The duration of primary schooling ranges from four to seven years, the most common types being a six-year course (10 counrries), and a five-year course (5 countries). The total duration of school-level education varies from 10 to 13 years; a twelve-year course being the most common (10 countries).

Table 4 on the next page shows the organization of the national education systems.

The countries also differ widely in their present stage of educational development in terms of enrolments and output. Recognizing the varying levels of development and in order to "facilitate visualization of educational development in the region as a whole in a way that also takes account of the variety of needs and prospects of the countries", the Asian Model of Educational Development 2/ grouped the developing countries of the region in three Groups with reference to the time in which they are likely to achieve at least seven years of universal compulsory education. Accordingly, the countries may be considered in the following Groups: $\frac{3}{2}$

Afghanistan, Laos, Nepal; Group A:

Burma, Cambodia, India, Indonesia, Iran, Mongolia, Group B:

Pakistan, Republic of Viet-Nam;

Ceylon, Republic of China, Republic of Korea, Malaysia, Group C: Philippines, Singapore, Thailand.

- In actual fact, a substantial number of children who are above or below the age of entry are enrolled, and the age composition of the enrolled population in each grade is considerably diverse. For data on this point reference may be made to: "Review of educational progress in the Asian Region". Bulletin of the Unesco Regional Office for Education in Asia, Vol. I, No. 1 (September 1966) 150 p. pp. 15-16.
- 2/ Unesco. An Asian Model of Educational Development: perspective for 1965-80 Paris, 1966. (The document was presented to, and published in the form approved by, the Conference of Ministers of Education and Ministers Responsible for Economic Planning of Member States in Asia, 22-29 November 1965, Bangkok).
- Japan is not included in the Groups.

The distribution of the total population and the total school enrolments in 1967 by Groups is as follows:

	Asian Region	Group A	Group B	Group C
Total population (%)	100	3.0	83.2	13.8
Total enrolment, all levels (%)	100	0.9	77.9	21.2

Expansion of Education: enrolments and institutions

The expansion of school enrolments with consequent increase in the teaching force and the number of educational institutions continues to dominate the educational landscape in Asia.

Table 5 presents regional data on educational expansion over the period of seventeen years, from 1950 to 1967. Total school enrolments nearly tripled, increasing from 49.9 million in 1950 to 140.1 million in 1967. During the same period, the number of teachers also nearly tripled, increasing from 1.4 million in 1950 to 4.1 million in 1967. The number of primary and secondary schools more than doubled, from 380 thousand in 1950 to 810 thousand in 1967.

Table 5. Total number of students enrolled, teaching staff and educational institutions, all levels of education, the Region, 1950-1967

	Students	enrolled	Teaching	g staff	Institution	ns -
Year	Numbers (millions)	Index (1950 = 100)	Numbers (Thousands)	Index (1950=100)	Numbers (Thousands)	Index (1950=100)
1950	49.9	100	1 427	100	380	100
1955	65.0	130	1 976	138	499	131
1960	89.4	179	2 724	191	629	165
1965	126.4	253	3 670	257	76 3	200
1967	140.1	280	4 057	284	8 10	2 13

Table 6 shows by index number the growth of school enrolments in relation to school-age population. During the period under review, school-age population (5-24 years) rose by 52 per cent and school enrolments by 180 per cent. This constituted an increase of 84 per cent in the proportion of population in the age group 5-24 years enrolled in schools at all levels, from 17.3 per cent to 31.9 per cent. The rate of increase of enrolments has increased in each five-year period, as has the rate of increase of the enrolment ratio (except for the period 1960-65).

^{1/} First and second levels of education only.

Table 6. Increase in population and enrolment, 1950-67 (Index 1950 = 100)

Year	School-age population (5-24 years) (a)	Student enrolment, all levels (b)	Ratio (b)/(a)
1950	100	100	1,00
1955	109	130	1.19
1960	1 23	179	1.46
1965	1 43	253	1.77
1967	152	280	1.84

Trends in the relationship between enrolment and population growth may also be illustrated by the average annual rate of increase of both these series, as set out in Table 7.

Table 7. Average annual rate of increase, population (5-24) and enrolment at all levels, Asian region, 1950-67 (percentage)

Period	Population (5-24 years)	Enrolment, all levels	
1950-55	1.8	5.4	
1955-60	2.3	6.6	
1960-65	3.1	7.2	
1965-67	3.1	5.3	

Table 8 gives comparative data for other regions of the world and shows the considerable gap between Asia and the more advanced regions of Europe and Northern America. In 1965, for example, 30.6 per cent of the school-age population was enrolled in schools in the Asian region, compared with 58.0 per cent for Europe and 74.1 per cent for Northern America. If the enrolment ratio grows at the same pace, of just less than 1 per cent point per year as registered over the period 1950-67, it will take about 27 years for the Asian region to achieve the enrolment ratio attained by Europe in 1965, and some 44 years to reach that of Northern America.

Table 8. Percentage of population enrolled, selected regions, 1950, 1960 and 1965

Region	Year	Enrolment, all levels, as percentage of total population	Enrolment, all levels, as percentage of age- group 5-24 years
Europe	1950	14.5	46.5
_	1960	16.9	53.7
	1965	18.3	58.0
Northern America	1950	19.9	59.3
	1960	24.5	73.0
	1965	26.9	74.1
Africa	1950	4.2	9.3
	1960	7.8	17.2
	1965	9.8	21.5
Latin America	1950	10.7	24.5
	1960	14.8	33.9
	1965	17.3	39.3
Asian region	1950	7.6	17.3
	1955	8.8	20.5
	1960	10.9	25.2
	1965	13.5	30.6
	1967	14.2	31.9

The data for the region necessarily cover a wide range of variation in the situation in individual countries. To illustrate these variations, Table 9 presents the data by Groups of countries according to the Asian Model. $\frac{1}{2}$

Table 9. Total enrolment, all levels, as percentage of population 5-24 years, by groups of countries, 1950-67 (percentage)

Year	Group A	Group B	Group C
1950	2.1	14.7	37.6
1955	2.8	18.4	37.6
1960	4.5	23 . 2	41.4
1965	8.1	28.8	45.2
1967	9.9	29.9	46.9
crease in ratio			
1950-67 (%)	371	103	25

It will be observed that, in 1967, enrolment in Group C represented 46.9 per cent of the population 5-24 years, one-and-one-half times higher than the proportion for Group B, and over four times higher than Group A.

 $[\]underline{l}$ op. cit. (p. 11)

Table 10 shows the expansion of total enrolments at all levels for the three Groups of countries during the period 1950-67. There was a seven-fold increase in enrolment for Group A, compared with three-fold and two-fold increases for Groups B and C respectively. Between 1950 and 1965, there was an accelerating rate of average annual increase in all three Groups of countries. Starting from a smaller base of enrolment ratios in 1950, countries in Groups A and B achieved a faster rate of increase, notable in the period 1960-65. During the last two years (1965-67), however, the rate of increase slackened markedly in countries of Groups A and B, while it stood constant in Group C.

Table 10. Increase in total enrolment, all levels, by Groups of countries, 1950-67

Enrolment	Year	Group A	Group B	Group C
Numbers (in thousands)	1950	177	35 832	13 925
·	1955	262	48 886	15 826
	1960	469	68 483	20 412
	1965	1 026	98 653	26 674
	1967	1 204	109 156	29 696
Index 1950 100	1950	100	100	100
	1955	$\frac{1}{148}$	$\frac{136}{136}$	$\frac{100}{114}$
	1960	264	191	147
	1965	579	275	192
	1967	679	305	213
Average annual rate of	1950-55	8.1	6.4	2.6
increase (percentage)	1955-60	12.4	7.0	5.2
- 3,	1960-65	17.0	7.6	5.5
	1965-67	8.3	5.2	5.5

The growth of enrolments in all three Groups has been of a much higher order than the population increase. The relationship between these two rates was 1:5.7 in Group A; 1:2.8 in Group B; and 1:1.4 in Group C. These differential growth rates of enrolments and population have led to a net improvement in the enrolment ratios.

There were significant variations in the countries in the rate of enrolment expansion at various levels. Table ll shows the average annual rates of increase by levels and Groups as well as for the whole region. In spite of short-term fluctuations, the general trend discloses a fairly rapid shift to second and third levels of education.

Table 11. Average annual rate of increase in Enrolment by level and Groups

Level of education	Period	Group A	Group B	Group C	The Region
First level	1950-55	7.6	6.1	1.4	4.8
1 1150 10001	1955-60	11. 2	6.2	5.0	5.9
	1960-65	17.7	7.1	3.6	6.6
	1965-67	6.5	4.2	4.6	4.3
Second level	1950-55	12.6	7.3	9.8	7.7
	1955-60	19.8	9.8	5.9	9.1
	1960-65	10.6	9.3	9.5	9.3
	1965-67	24.9	7.9	8.3	8.0
Third level	1950-55	19.6	10.8	9.4	10.4
	1955-60	31.3	11.3	7.2	9.7
	1960-65	12.0	7.8	10.3	8.5
	1965-67	24.1	12.2	11.4	12.0

The distribution of enrolment by levels is changing significantly, which is reflected in the education pyramid. While in 1950 the enrolments in the first, second and third levels were in the proportions of 83:15:1.4 respectively for the region, by 1967 these had changed to 75:22:2.6. The higher annual rate of enrolment increase in the second and third levels is in evidence also in the distribution of enrolments by levels as the following statement for Groups A, B and C will show.

	Grou	(in percentage) Group A Group B Group C					
	1950	1967	1950	1967	1950	1967	
First level	91.8	85.2	81.4	74.4	88.0	77.5	
Second level	7.8	13.3	17.2	23.2	10.4	19.1	
Third level	0.4	1.5	1.4	2.4	1.6	3.4	
All levels	100	100	100	100	100	100	

Inter-country comparisons of enrolments by level suffer from a variety of limitations arising out of the fact that national education systems differ in their structures and their definitions of levels of education. Subject to this caveat, Table 12 on the next page presents data on the changes in the education pyramid for the regions of the world.

^{1/} Percentage distribution for the Region is detailed in Table A 1.3, page 66.

Table 12. Changes in the education pyramid, Asian and selected regions, 1950, 1960 and 1965 (percentage)

Region	Year	All levels	First level	Second level	Third level
Europe	1950	100	75	22	2.2
	1960	100	68	29	2.9
	1965	100	64	32	3.9
Northern America	1950	100	72	21	7.2
	1960	100	69	23	7.6
	1965	100	64	25	10.2
Africa	1950	100	91	8	0.8
	1960	100	89	10	0.9
	1965	100	89	12	1.1
Latin America	1950	100	89	10	1.6
	1960	100	86	12	1,,8
	1965	100	82	16	2.2
Asian region	1950	100	83	15	1.4
	1955	100	81	17	1.9
	1960	100	79	19	2.2
	1965	100	77	21	2.3
	1967	100	75	22	2.6

A general comparison of trends in Table 12 and the distribution of enrolments by level for Groups of countries in Asia points to the marked shift to second and third levels that is taking place in the Asian region, notably in countries in Group B. Considering that countries in Group B have yet to achieve universal primary education, it would seem that the development of post-primary education in these countries has moved ahead of the development of primary education.

Educational institutions at the first and second levels $\frac{1}{2}$

The total number of institutions at the first and second levels and the per cent increase are given in Table 13 in the form of index numbers.

^{1/} At the third level, the unit of counting in the national statistics is sometimes an institution and sometimes a faculty. For this reason, information on third level institutions has not been included.

Table 13. Number of institutions at the first and second levels, 1950-67

37	First level		Second level		
Year	Number (thousands)	Index 1950=100	Number (thousands)	Index 1950=100	
1950	345	100	35,7	100	
1955	446	129	53.2	$\overline{149}$	
1960	534	155	95.2	266	
1965	630	183	133.1	373	
1967	662	192	148.4	4 15	

The number of institutions at the first level nearly doubled, from 345 000 in 1950 to 662 000 in 1967. At the second level, there was a four-fold increase from 35 700 in 1950 to 148 400 in 1967. The average number of pupils per institution at the first level increased from 121 to 159, while at the second level it fluctuated at around 210 pupils per institution.

Data regarding public and private institutions are not available for all countries. Such information as is available is presented in Table A 14 (pp.107-8) in terms of the proportion of enrolment in these two types of institutions at the first and second levels.

At the first level of education, public institutions have a major share of the total in all countries. At the second level, a few countries have more private than public schools but the emerging general picture in the region is undoubtedly for the State to carry the major share of responsibility in education.

Girls' Education

The achievement of an adequate level of educational facilities in the Asian region is contingent on correcting the existing imbalance in the enrolment ratios for boys and girls.

In 1950, the proportion of girls in total enrolment at all levels was 30 per cent. It improved throughout the period under review, rising to 38 per cent by 1967. The increase during the period 1950-1967 by levels of education, separately for male and female enrolment, is shown below, in percentage.

Level of education	Male enrolment (a)	Female enrolment (b)	Ratio (b)/(a)
First level	1 23	217	1.76
Second level	252	561	2,23
Third level	329	811	2.47
All levels	1 49	253	1.70

As indicated by the ratio (b)/(a) in the above table, gains in female as compared to male enrolment were increasingly higher, particularly at the second and third

levels. Moreover, female enrolment increased faster than did total enrolment at each level of education during the whole of the period 1950-67. (Table 14).

Table 14. Average annual rate of increase in total and female enrolment, by levels of education, 1950-65 (percentage)

Period	Sex	All levels	First level	Second level	Third level
1950-55	MF	5.4	4.8	7.7	10.4
	F	7.4	6.9	11.7	13.9
1955-60	MF	6,6	5.9	9.1	9.7
	F	7.9	7.1	12.6	14.2
1960-65	MF	7.2	6.6	9.3	8.5
	F	8.3	7.7	11.6	11.5
1965-67	MF	5.3	4.3	8.0	12.0
	F	6.5	5.5	10.2	19.0

The proportion of girls in the population of the age group 5-19 years is estimated at 49 per cent for the region around 1960. It might therefore be expected that female enrolment, at least at the first and second levels of education, should approach 49 per cent of the total enrolment. Although female enrolment in the region reached 38 per cent of the total in 1967, it does not yet constitute a scale which is proportionate to the population percentages by sex. To provide a comparative context, Table 15 presents data on female enrolment for selected regions of the world and Table 16 on percentage of female enrolment in the three Groups of countries in the Asian region.

Table 15. Female enrolment as percentage of total, by level of education, selected regions, 1950, 1960 and 1965

Region	Year	All levels	First level	Second level	Third level
Europe	1950	46	47	44	28
	1960	47	49	45	30
	1965	47	49	46	33
Northern America	1950	48	48	51	32
	1960	4 8	49	51	37
	1965	48	49	49	39
Africa	1950	30	30	30	21
	1960	35	37	31	20
	1965	37	38	30	22

16

Table 15. Female enrolment as percentage of total, by level of education, selected regions, 1950, 1960 and 1965 (cont'd.)

Region	Year	All levels	First level	Second level	Third level
Latin America	1950	47	48	45	24
	1960	48	49	47	32
	1965	48	49	48	34
Asian region	1950	30	32	19	15
_	1955	33	35	22	21
	1960	35	37	26	21
	1965	37	39	29	24
	1967	38	40	30	27

Table 16. Percentage of female enrolment in total enrolment, by level of education and Group, in the Asian Region, 1950, 1960, 1967

Level of education	Year	Group A	Group B	Group C
First level	1950	10	27	44
	1960	17	35	46
	1967	18	38	48
Second level	1950	10	16	31
	1960	10	24	37
	1967	13	27	42
Third level	1950	6	1 1	24
	1960	10	17	33
	1967	15	21	45
All levels	1950	10	2 5	4 3
	1960	16	32	45
	1967	17	35	47

It will be noticed that Group C countries in the region have achieved a high level in the provision of educational facilities for women while the levels for countries in Groups A and B are lower in inverse order. The difference between Group C and other Groups is greater in regard to educational opportunities for women than in most other aspects of educational development.

Teaching staff

Corresponding to the expansion of student enrolment, there was a considerable increase in the teaching force. For all levels, the number of teachers is estimated to have increased from 1.43 million in 1950 to 4.06 million in 1967, representing a total increase of 184 per cent over the period. Table 17 gives the relevant data.

Table 17. Total number of teachers and increase (Index 1950=100) by level of education, 1950-67

	All le	vels	First	level	Second	level	Third	level
Year	Number (thou- sands)	Index	Number (thou- sands)	Index	Number (thou- sands)	Index	Number (thou- sands)	Index
1950	1 427	100	1 047	100	342	100	38	100
1955	1 976	$\overline{138}$	1 373	132	542	$\overline{158}$	62	162
1960	2 724	191	1 691	163	932	272	102	265
1965	3 670	257	2 228	215	1 289	376	153	400
1967	4 057	284	2 336	225	1 534	448	187	486

The total increase amounted to 125 per cent, 348 per cent and 386 per cent, respectively, for the first, second and third levels. The relationship of enrolment to teachers as measured by the pupil-teacher ratio remained almost constant at 35 pupils per teacher. The general picture is however considerably modified when the data are analyzed by level of education. Table 18 presents pupil-teacher ratios by level of education and Table 19 the same data for the three Groups.

Table 18. Pupil-teacher ratios by level of education, 1950-67

,	Year	All levels	First level	Second level	Third level	
	1950	35	40	22	19	
	1955	33	38	20	19	
	1960	33	42	î 8	19	
	1965	34	43	21	19	
	1967	35	45	20	19	

Table 19. Pupil-teacher ratios by level of education and Groups of countries, 1950 and 1965

Level of education	Group A		Group B		Group C	
Level of education	1950	1965	1950	1965	1950	1965
First level	34	36	38	47	43	35
Second level	13	18	22	19	26	30
Third level	8	9	17	19	25	19
All levels	30	32	33	35	40	33

It will be noted that, at the first level of education, pupil-teacher ratios have risen in countries of Groups A and B (in the latter quite steeply), while they have declined in Group C. The expansion of first level enrolment in Groups A and B would appear to outpace the supply of teachers. In Group C where the first level education is almost universal (and therefore the average annual rate of enrolment increase is not high) the pupil-teacher ratios are now decreasing. The Asian Model envisaged an increase in pupil-teacher ratios in countries with expanding enrolments and the trend of actual development appears to correspond to this forecast.

At the second level of education, pupil-teacher ratios have increased in countries of Groups A and C but declined in Group B. (Since Group B has the largest number of countries and population, its performance has the effect of showing a decline in the regional average). The decrease in pupil-teacher ratios in Group B is accounted-for by India and Indonesia.

At the third level of education, student-teacher ratios have increased in Groups A and B but improved in Group C.

In the overall picture that emerges, increases in pupil-teacher ratios stand out, and point to the inference that teacher supply may not be increasing as fast as enrolments. This is borne out by an analysis of pupil-teacher ratios in individual countries. By way of illustrating the trend towards high pupil-teacher ratios, the brief table which appears below tabulates the pupil-teacher ratios by number of countries at the first level of education.

Number of pupils per	Number of	f countries
teacher, first level	Around 1950	Around 1965
below 30	4	4
30 - 34	3	3
35 - 39	5	2
40 - 44	1	3
45 and over	5	6
Total countries	18	18

Student enrolment by levels of education is reflected in the distribution of the teaching force. For the whole region in 1967, out of 100 teachers, 58 are at the first level, 38 at the second, and about 5 at the third level. Table 20 presents the percentage distribution of teachers by level of education for the Asian and other major regions, for the years 1950, 1960 and 1965.

Table 20. Percentage distribution of teachers by levels of education, selected regions, 1950, 1960 and 1965

Region	Year	All levels	First level	Second level	Third level

	1960	100	62	34	3.7
	1965	100	61	35	4.2
	1967	100	58	38	4.6

Female teaching staff

Available statistics of teachers by sex and level of education are far from complete: the regional estimates presented in Table 21 are intended to give broad orders of magnitude. The data available for the third level are too inadequate to make possible an estimate of the female aggregates. During the period under review, the rate of increase in female teachers appears to have been higher than that for the total teaching force.

As a result of higher rates of increase, the proportion of female to total teachers has risen throughout the period. For the first and second levels combined (no data available for the third level), the proportion rose from 25 per cent in 1950 to 32 per cent in 1967. At the first level, of about 1.29 million teachers added to the teaching force, .57 million were female; at the second level, of 1.19 million teachers added, nearly .33 million were female.

Table 21. Estimated annual rate of increase, and total increase, of teaching staff, by levels of education 1950-67 (in percentage)

	First	level	Second	l level	Third	level

Total increase 1950-67 (%)	125	202	348	585	386	• • •

Qualifications of Teachers

For an analysis of the situation relating to supply of teachers, it is essential to know the qualifications of the teaching force. Although data are not available for the whole region on this important point, there is some information for a number of countries. It is not in a form that would lend itself to comparative tabulation, nor does it in all cases cover both elements by which the level of qualification of teachers is ascertained, namely: qualification relating to basic schooling, and qualification relating to professional training. The situation of a few individual countries is summarized in the paragraphs which follow. This summarization may help to indicate a general trend and, incidentally, may help to draw attention to the informational gap. The countries covered by the summary are drawn from the three Groups and to this extent are fairly representative of the general situation in the respective Groups.

In countries of Group A, the supply of teachers and their level of qualification are determined mainly by the fact that the next higher level of education from which teachers are drawn is not sufficiently developed to serve as a steady source of supply for the increasing number of teachers required by the education system.

The statement for Afghanistan on the next page shows, in terms of percentages, the proportion of primary and secondary school teachers classified by level of qualifications in 1967.

Afghanistan: Primary and secondary school teachers by level of qualification, 1967

	Primary schools	Secondary schools
Below grade 9 or no formal institution	16.5	10.6
D.M.A.* emergency or grade 9	19.2	14.0
Grades 9 to 11 general education	38.2	21.9
D.M.A. grades 11 and 12	8.7	18.9
Lycee grade 12	11.0	17.1
Islamic and vocational schools	6.4	10.3
Higher teachers college	-	1.4
Licence or higher qualification	-	5.8
	100	100

(Source: Afghanistan. Ministry of Education. Planning Department.

Education in Afghanistan during the last fifty years. Kabul,

1968. 258, 59 p.)

It will be noticed that, at the first level of education, there is a substantial proportion of teachers who have not had 10 grades of basic schooling. Even at the secondary level, nearly 50 per cent of the teaching force does not possess qualifications higher than full secondary education. In the effort to improve the basic qualifications of teachers for the first level, the Government has decided to recruit teachers only from regular teacher training schools at the level of grade 12 or from emergency courses of grade 10, and from among baccalaureat graduates without professional training.

In countries of Group B, the second and third levels of education are already developed to a scale to ensure a steady supply of teachers. In these countries generally, the problem presents itself in three aspects: up-grading the qualifications of teachers already in the teaching force who were recruited in the past with inadequate qualifications; expanding the capacity of training establishments to meet the demands of a rapidly expanding education system; and creating cadres of teachers for new subjects being introduced in the curriculum.

^{* &}quot;Daral M. Allamein" (D.M.A.) is the basic institution for the training of teachers in Afghanistan.

In <u>India</u>, qualified teachers (i.e. graduates and those who have completed the secondary school course), who formed only 10.3 per cent of the total number of teachers in the primary schools in 1950-51 increased to 51.0 per cent in 1965-66. In the higher primary schools, the proportion of qualified teachers rose from 47.2 per cent in 1950-51 to 60.0 per cent in 1965-66. At the present rate, it may take another 20-25 years to ensure that every primary teacher has had at least ten years of general education. — For secondary school teachers the distribution by qualification was as follows (in percentage):

	1950-51	1965-66
Graduates and post-graduates	42	53
Matriculates and under-graduates	41	39
Below matriculation	17	8
Total	100	100

Statistics available for Iran for 1965/66 give the following breakdown for "instructional staff" by level of qualification (in percentage)

	Elementary schools	General Public Secondary schools
University degrees	2.6	55
High School diploma	70.8	40
Below High School	26.6	5
Total	100	100
of which: classroom teachers	86	80

In Pakistan, the proportion of trained teachers in primary schools increased from 70.4 per cent in 1961 to 75.7 per cent in 1966. Data given below will show that, during the years 1961-1964, there was considerable expansion in the number of teachers at the first level but the proportion of trained to untrained teachers remained almost unvaried. In subsequent years (1964-1966) the number of teachers increased at a much slower pace but there was sharp increase in the proportion of trained teachers. At the second level of education, there was a steady increase in the number of teachers as well as improvement in the proportion of trained teachers throughout the period.

Year	Primary	school	Secondar	y school
	Number	% trained	Number	% trained
1961	137 310	70.4	63 494	56. 1
1962	150 013	70.0	69 226	56.5
1963	162 291	69.7	77 166	56.3
1964	170 490	71.5	83 498	59.2
1965	170 615	75.3	88 896	62.3
1966	172 953	75.7	94 511	64.1

Source: Report of the progress of education in Pakistan, 1963/64 to 1967/68, presented at the International Conference of Public Education (Geneva). Ministry of Education, Government of Pakistan.

Statistics for <u>Thailand</u> of elementary and secondary school teachers by qualifications are available, year by year, for the period 1957-67. $\frac{1}{2}$ The following data give the proportion of teachers by five levels of qualifications.

		ge of teache:		
	Elementary	Elementary schools $\frac{1}{2}$ Secondary schools $\frac{2}{2}$		
	1961	1967	1961	1967
1. Bachelor Degree or higher	0.4	0.6	10.4	23.2
 Diploma in Education or equivalent 	3.2	13.1	40.4	44.6
3. Certificate in Education or equivalent	20.5	35,4	32.3	17.4
4. Pre-primary Certificate or lower	36.6	19.6	5.6	1.9
5. No teaching certificate	39.4	31.3	11.3	12.9
	100%	100%	100%	100%
Total number (= 100%)	(111 434)	(145 834)	(15 153)	(19 519)

^{1/} Refers to grades I-VII

The effort to improve the basic and professional qualifications of teachers, as well as the constraints in operation, are reflected in the above figures. At the first level of education there was a considerable increase in the proportion of teachers with "certificate in education" or higher, but there was not a reduction of the same order in the proportion of unqualified teachers. This seems to indicate that the primary thrust of the effort has been to ensure that the new entrants to the teaching force have adequate qualifications while inadequately prepared teachers in the existing teaching force have received relatively less attention. At the second level, improvement in qualifications is marked by an increase in the proportion of teachers who have "diploma in education" or higher, and a sharp decrease in the proportion of teachers with only a "certificate in education". In spite of the considerable effort, the proportion of under-qualified or untrained teachers, both at elementary and secondary levels remains substantial, at 51 per cent and 32 per cent respectively.

^{2/} Refers to grades VII-XII

^{1/} Thailand. National Education Council. Educational statistics of Thailand, 1957-1967. Bangkok, 1969. 179 p.

In countries of Group C, preparation of teachers not only for secondary schools but also for elementary schools is now shifting to the third level of education, the "normal school" system being replaced by Junior Colleges for teacher training. In consequence, the qualification of teachers is rising much more rapidly than in other countries.

In the statistics for the Republic of Korea, teachers are classified by educational attainment. A summary of the data for 1967 is presented below.

Educational		Elementary Schools		Middle Schools		General High Schools	
attainment (years)	Number	%	Number	%	Number	%	
9 years or less	9 492	10.6	220	1,0	58	0.7	
10 - 12	51 535	57.8	1 366	6.3	3 10	3.9	
13 - 14	19 488	21.8	6 302	29.1	1 007	12.7	
15 - 16	8 461	9.5	13 230	61.0	6 076	76.4	
17 and more	301	0.3	560	2.6	497	6.3	
Total	89 277	100.0	21 678	100.0	7 948	100.0	

Source: Statistic Year Book of Education, 1967. Ministry of Education, Republic of Korea.

It will be noticed that only 10.6 per cent of the teaching force at the first level now has nine years or less of basic schooling and that most teachers (about 80 per cent) have 10-14 years. In middle schools (grades 7, 8, 9) the proportion of under-qualified teachers has been reduced to about 7 per cent while in general high schools it is only 17 per cent.

First level of education

At the first level, enrolments in the region increased at an average annual rate of 6.6 per cent during 1960-1965 (compared to 5.9 per cent in 1955-1960) and seemed to slacken down to an increase of 4.3 per cent in 1965-1967. 1/2

Since national policies on the expansion of the first level of education vary not only from one country to another but even within the same country from one planning period to the next, it is not possible to make a wide generalization about the general trends in the increase of enrolments. Of 17 countries in the region for which comparative statistics are available, 9 had a higher rate of average annual increase in the period 1955-1960 than in the period 1960-1965, while 8 countries had a higher average annual increase during 1960-1965 over the earlier quinquennium. Broadly, it would hold true to say that countries which have already achieved a high enrolment ratio have now an almost stable average annual rate of increase, while countries which have an enrolment ratio of less than 70 per cent show an accelerating rate of annual increase. Table 22, on page 28, presents the progress of the countries with reference to the enrolment ratios which they achieved in around 1960 and around 1967.

Around 1960 there were only 9 countries in Asia with an enrolment ratio of 70 and above; by 1967 there were 13 such countries: 8 of these were above 90 per cent.

The Karachi Plan and its implementation

The Regional Meeting of Representatives of Asian Member States on Primary and Compulsory Education which was convened by Unesce at Karachi in 1959-1960, adopted a Regional Plan (Karachi Plan) 2/ for the provision of universal and free primary education for at least seven years' duration, with 1980 as a target date for its achievement.

^{1/} The rates of increase in enrolment are given in Table A 1.4, p. 66.

^{2/} Unesco. The needs of Asia in primary education; a plan for the provision of compulsory education in the region. Paris, 1961. (Educational Studies and Documents, No. 41)

^{2/} In Thailand, the first level of education till 1962 comprised the first four grades and the enrolment ratio was 115%. In 1962, the duration of first level education was extended to seven years. On transition to a longer duration of primary education, the enrolment ratios calculated now with reference to age-group 7-13 instead of 7-10 appear lower. Table A 10 (p. 97) should be interpreted in the context of this change.

The progress of education at the first level might usefully be reviewed with reference to the main projections made in the Karachi Plan. It has of course to be recognized that the Karachi Plan covered both quantitative and qualitative aspects of educational development in the region, but the comparison of actual progress against the Karachi Plan's projections has necessarily to be limited to the main quantitative parameters. Furthermore, since the projections of the Karachi Plan are presented in terms of five-year periods, the comparison covers only the period up to 1965.

It is necessary to draw attention to certain limitations within which a comparison of actual progress with the main targets of the Karachi Plan should be seen.

First, the Karachi Plan dealt with 15 countries in Asia and did not cover the Republic of China, Mongolia and Singapore — which subsequently became participants in the Plan. Though the coverage of the present review (18 countries) and that of the Karachi Plan (15 countries) differ, the regional aggregates are not materially affected, considering the population and enrolment weight of Mongolia and the Republic of China in the regional totals.

Second, while the Karachi Plan targets are based on the assumption of at least seven years' first-level education, the enrolment data are presented here according to national education systems with their varying duration of first-level education. The gap between target figures and actual enrolments, representing shortfall in performance, would therefore be wider than that suggested by the data. The comparison may help, nevertheless, to identify some general trends in enrolment growth.

The Plan pointed out that its effective realization implied universal provision of schooling facilities, universal enrolment of children of the various age groups, and the universal retention of children under instruction for the duration of compulsory education. Almost all countries of the region have compulsory education laws incorporated in legislative enactments or policy declarations of the national Governments, but the degree to which these laws are enforced varies considerably. Only in one country, Thailand, has the duration of first-level education been extended from 4 to 7 years. In one country it is 8 years, in 10 countries 6 years; in 6 countries 5 years and in one country 4 years. There is, however, a significant trend towards extending the period of compulsory education, notably in countries which have achieved a high level of enrolment ratio: the Republic of Korea, the Republic of China and Malaysia have in view the extension of the period to 9 years.

^{1/} The statistics for Singapore, however, were included in the statistics for Malaya.

The population estimates accepted in the Karachi Plan had subsequently to be revised upward as had also the actual enrolment data for the basic years, 1950 and 1960. The Karachi Plan population estimates for 1960 and 1965 fall short of the revised estimates (for the same 15 countries) by about 5% (1960) and about 6% (1965). Taking account of these revisions and including the data for countries which subsequently became participants in the Karachi Plan, Table 23 presents the original data for population and enrolment, as given in the Karachi Plan, and corresponding revised data for the same years (but for 18 countries).

Table 23. Primary school enrolment as percentage of total population, Asian region, 1950, 1960 and 1965

	Karach	i Plan (15 co	untries)	Corresponding Revised data (18 countries)			
Year	Total population (millions)	Primary school enrolment (millions)	Enrolment as percentage of population	Total population (millions)	Primary school enrolment (millions)	Enrolment as percen- tage of population	
1950	648.4	38.7	5.96	656.9	41.6	6.3	
1960	774.2	66.2	8.55	823.6	70.3	8.5	
1965	867.2	95.4	11.00	935.6	96.8	10.3	

The Karachi Plan envisaged that, by 1980, first-level enrolment (7-year duration) will represent 20 per cent of the total population, this target to be achieved progressively: 8 per cent by 1960, 11 per cent by 1965, 14 per cent by 1970 and 20 per cent by 1980.

The actual increase in enrolment in the period 1960-65 brought the proportion to 10.3 per cent as compared to 11 per cent envisaged in the Karachi Plan. In the five-year period, population grew faster and enrolment at a slower pace than the rates estimated in the Karachi Plan. While population was expected to grow by 12 per cent in five years, it actually increased by 14 per cent; enrolment expected to grow by 44 per cent achieved only a 38 per cent increase. The shortfall is larger than the figures would suggest, bearing in mind that 38 per cent represents enrolment in a shorter duration of first-level education.

The percentage of primary enrolment to total population is given below for each Croup of countries - (Groups A, B and C) for the years 1950, 1960 and 1965. Compared with the Plan target of 11 per cent by 1965, it will be noted that Group C is above it while Group B is below and Group A considerably below the target.

Primary enrolment as percentage of total population, 1950-65

Year	Group A	Group B	Group C
1950	1.0	5.3	14.8
1960	1.7	7.7	15.2
1965	3.5	9.6	16.3

Table 24 presents primary enrolment as percentage of total population in individual countries classified in 1965 as (i) Equal or higher than Plan target (ii) Below Plan target (The Groups are also indicated).

Table 24. First-level enrolment as percentage of total population

(i) Equal to or l	nigher tha	ın Plan t	arget	(ii) Below	Plan tar	get	
Targe	<u>:t</u>	<u>8%</u>	11%	Targ	Target		
Country	Group	1960	1965	Country	Group	<u>1960</u>	1965
Cambodia	В	10.4	13.0	Afghanistan	Α	1.3	2.4
Ceylon	C	16.8	16.6	Burma	В	7.2	9.0
China (Taiwan)	C	17.8	18.1	India	В	8.2	10.2
Indonesia	В	9.6	11.0	Iran	В	6.6	8.9
Korea, Rep. of	C	14.7	17.4	Laos	Α	4.3	6.1
Malaysia	C	15.6	15.3	Mongolia	В	7.7	9.6
Philippines	C	15.3	20.3	Nepal	Α	2.8	3.8
Singapore	C	17.4	19.6	Pakistan	В	5.4	6.8
Thailand	C	14.9	15.1	Viet-Nam, Rep. of	В	9.1	10.3

It will be seen from Tables 23 and 24 that the problem of expanding enrolmentarises mainly in countries of Groups A and B. The trends in expanding enrolment in the period 1965-67 (Table A 10, page 95) seem to indicate that by 1967 at least three more countries (Burma, Mongolia and Rep. of Viet-Nam) would have approached the Plan targets.

The targets of the Karachi Plan were also expressed in terms of total number of children to be enrolled and the additional number of children to be enrolled each year. Table 25 on page 32 shows the target enrolment and the enrolment achieved for 15 countries originally included in the Karachi Plan. The number of children enrolled in 1960 was higher than projected in the Plan while the enrolment by 1965 fell short of the original target by slightly less than one per cent.

Table 25. Targets for School Enrolment for 15 countries (1960-65) (in millions)

	Total number of children 1960	Total number of children 1965	Additional enrolment 1960-65
Karachi Plan targets	66.18	95.39	29.21
Actually achieved	68,39	94.40	26.01

The Karachi Plan estimated, on a pupil-teacher ratio of 35, that 2.7 million teachers should be in position by 1965. The actual progress achieved shows that only in Group C countries has the pupil-teacher ratio taken the trend envisaged in the Plan. In countries of Groups A and B, the pupil-teacher ratios have shown a marked rising trend and in Group B have already gone beyond the assumed ratio of the Plan. In the result, the estimated number of teachers in position in 1965 (2.2 million) was below the target of the Karachi Plan.

The projected enrolments of the Karachi Plan were shown in a diagram—which is reproduced on the next page with an addition showing the actual progress for the region and for each Group.

Educational Wastage

Wastage 2/ continues to be the most important problem of educational development at the first level of education in many of the Asian countries. On the regional aggregates it is estimated that, out of 24.5 million pupils enrolled in grade I in 1960, approximately 11.5 million (47 per cent) reached grade IV of the primary level; the rest, approximately 53 per cent, dropped out. The enrolment ratios for various countries have therefore to be considerably modified in order to assess the level of effective enrolment. For measuring effective enrolment, it would be necessary not only to take account of dropouts and repeaters, but also of attendance rates. Although data on attendance rates are not available, the magnitude can be indirectly inferred from the extent of wastage, since it has been found that a poor attendance rate is reflected in a high dropout and repetition rate.

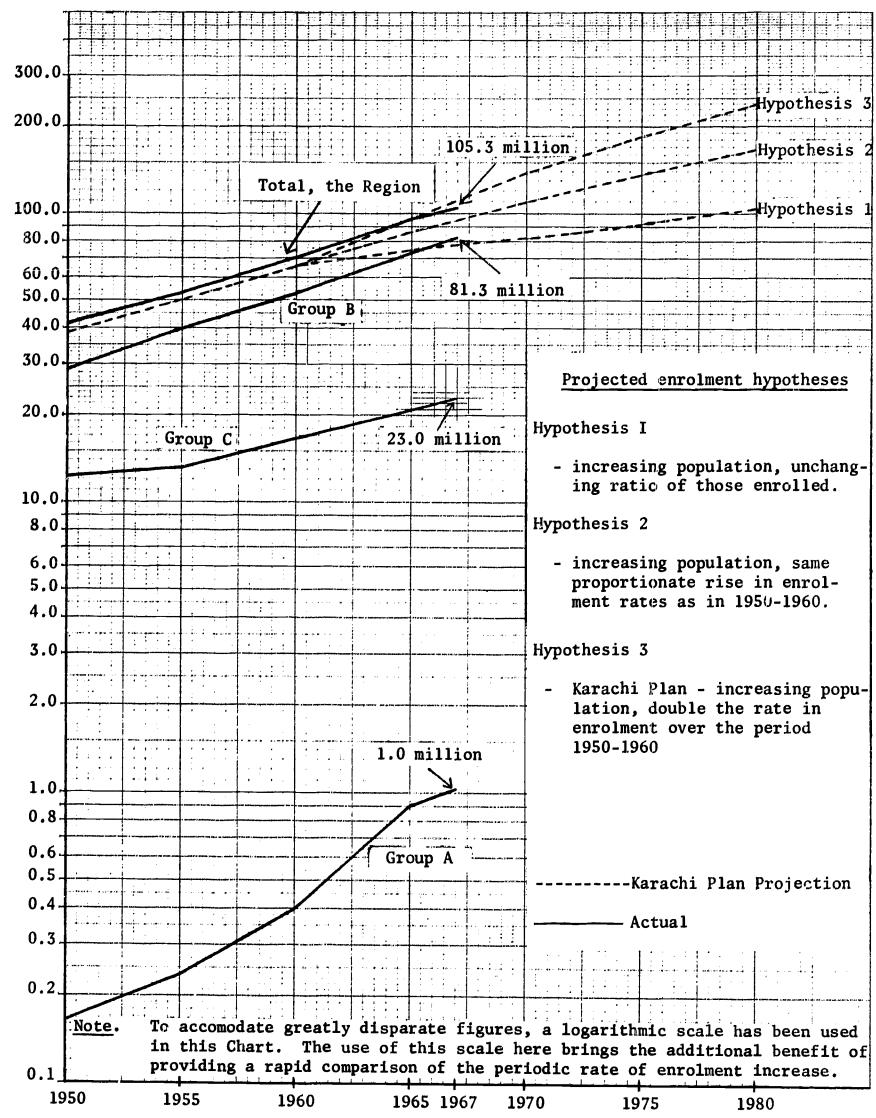

^{1/ &}quot;The needs of Asia in primary education", a plan for the provision of compulsory education in the region. op. cit. p. 14.

The problem of educational wastage at the first level of education in Asia has been discussed in detail in "The problem of Educational Wastage", Bulletin of the Unesco Regional Office for Education in Asia, Volume I, No. 2, March 1967. 68, vii p. This publication is now out-of-stock; a revised version of the study is in the early stages of preparation.

Projected primary enrolment on three hypotheses of the Karachi Plan for the Region, and actual enrolment for the Region, Groups A, B, C.

Millions of pupils

Retention rates have been estimated by the "cohort" method, i.e. enrolment in one grade is followed up from year-to-year. The method has some obvious limitations, the main one arising from the fact that, since data for repeaters or new entrants are not available, the "cohort" method cannot distinguish repeaters from other pupils, which generally leads to an under-estimation of wastage. The estimates, however, are orders of magnitude which serve to highlight one of the central problems of educational development in the region.

For comparison, retention ratios for the regional aggregates have been estimated in Table 26 for grades I-IV. It will be noted that the highest incidence of wastage occurs between grades I and II.

Table 26. Retention ratios in the first four grades of primary education, the Region

			Enrolment (thousands)	Retention ratios (%) from grade I
Grade	I	(1960)	24 520	100
Grade	II	(1961)	15 735	64.2
Grade	III	(1962);	13 366	54.5
Grade	IV	(1963)	1 1 530	47.0

Significant differences are found in the retention ratios for the three Groups of countries, A, B and Z. The data are presented in Table 27.

Table 27. Retention ratios in the first four grades of primary education by Groups A, B and C (percentage)

Crado voor	F		
Grade - year	A	В	C
I (1960)	100	100	100
II (1961)	50	60	83
III (1962)	42	50	78
IV (1963)	34	42	73

34

Table A 15 (pages 109-112) presents grade retention ratios for each country of the region. A reference to the table will show that wastage rates are higher for girls than for boys. Studies also provide evidence that wastage rates are higher in rural than in urban areas. These factors combine to increase disparities in the provision of educational opportunities in the national education systems.

Table 28 classifies the countries by retention ratios observed in the total duration of the first level of education as defined in their respective education systems.

Table 28. Countries classified by Retention Ratios

High retention ratio : 80% and above : Afghanistan, Rep. of China,

Rep. of Korea, Malaysia,

Mongolia, Singapore.

Medium retention ratio : 60% - 80% : Iran

Low retention ratio : 40% - 60% : Ceylon, Philippines, Thai-

land, Rep. of Viet-Nam.

Very low retention ratio: below 40%: Burma, Cambodia, India,

Laos, Pakistan.

(Data not available for Indonesia and Nepal)

Broadly speaking, countries with high enrolment ratios tend also to have high retention ratios, although the relationship is not invariable. Retention ratios are relatively low in countries with enrolment ratios in the range of 30-70. In countries with very low enrolment ratios, enrolment may be drawn mainly from urban and semi-urban population and, representing a highly selective group, is not subject to attrition in the same degree. Such countries also tend to have high retention ratios.

Transition from first to second level

On completion of the first level of education, the proportion of pupils proceeding to the next higher level is an important indicator of the growth potential of an education system. Transition ratios (the proportions of pupils proceeding to the next higher level) are determined by a variety of factors (the selection procedures, availability of schooling facilities, social demand for education etc.) and must be interpreted bearing certain considerations in mind, notably the enrolment ratios and wastage rates. A high transition ratio in a country which has achieved a high enrolment ratio and low wastage rate would generally indicate an expanding impetus in the education system. On the other hand, a high transition ratio in a country with a low enrolment ratio (or relatively higher

enrolment ratio with high wastage rate, which is in effect tantamount to low enrolment ratio) would indicate a highly selective education system.

Data are not available on the number of pupils successfully completing the primary course year-by-year. In the absence of such data, it is possible only to compare, for several countries for which enrolments by grades are available, the enrolment in the terminal grade of first-level education (in year t) with enrolment in the beginning grade of the next higher level of general education (in year t+1). The limitations of these inter-grade ratios are obvious: not all pupils in the terminal grade pass the primary course successfully while the enrolment in the next higher grade would also include repeaters. To a substantial extent these two factors tend to cancel each other and inter-grade ratios would approximate transition ratios. To minimize random fluctuations, transition ratios (or inter-grade ratios) presented in Table 29 were calculated as averages of three years and, whenever possible, for two points of time.

Table 29. Transition ratios between the first and second levels of general education, selected countries (percentage)

Country	Terminal grade at first level	First Period	Ratio	Second Period	Ratio
China (Taiwan)	VI	1954-57	36	1964-67	54
Korea, Rep. of	VI	1953 - 56	48	1964-67	47
Malaysia, West	VI	1955-58	54	1964-67	87
Singapore	VI	1954-57	75	1960-63	70
Ceylon	v	1953 - 56	79	1961-64	88
Philippines	VI	1950-53	57	1960 - 63	63
Thailand	VII	1957-60	89	1964-67	84
India	v	1950-53	72	1960-63	84
Iran	VI	1958-61	75	1962-65	70
Pakistan	v	1955-58	61	1962-65	69
Viet-Nam, Rep. of	v	1956-59	51	1961-64	53

In all but two countries (Philippines and Thailand), the next higher level of general education is the lower secondary (also called middle or intermediate or junior high school), admission to which is generally determined by examination at the end of the primary course without any further selective process. In the Philippines and Thailand, the higher level is high school.

The first four countries in Table 29 have high enrolment ratios at the first level and high retention ratios (Table 28). Except for the Republic of Korea, they have high transition ratios, indicating thereby that in terms of enrolments, they have achieved conditions for lengthening the period of education for all children. Ceylon, the Philippines and Thailand also have high enrolment ratios but relatively low retention rates at the first level, with the result that the high transition ratios are representative of a selective group. The remaining countries in the table have enrolment ratios in the middle range (between 40% and 75%) but also have low retention rates so that the transition ratios, though apparently high, represent a smaller and selective group of pupils.

Second level of education

In the national education systems, the second level of education in all countries except Mongolia and Iran is divided into two stages (in Malaysia three sub-divisions), the first stage covering general education and the second which includes more specialized programmes.

During the period 1950-67, enrolment at the second level of education increased nearly four-fold. The average annual rate of increase declined from around 9 per cent during 1955-1960 and 1960-1965 to about 8 per cent in 1965-1967.

The enrolment ratios vary over an extremely wide range within the region, being as low as about 2 per cent (Laos) and as high as over 50 per cent (Mongolia). Table 30 classifies countries by their enrolment ratios at the second level. Group C countries with high enrolment ratios at the first level also have relatively high enrolment ratios at the second level. Group B countries, however, show wide variations and are to be found placed in all ranges of enrolment ratio. This may well be indicative of the imbalance existing in some countries between the growth of first-level education and of second-level education.

Table 30. Countries by enrolment ratios at the second level of education (around 1965-1966)

Enrolment ratio	Countries				
over 50	Mongolia.				
30 - 50	Singapore; Ceylon; China (Taiwan); Philippines; Rep. of Korea.				
20 - 30	Malaysia; India; Iran.				
10 - 20	Burma; Rep. of Viet-Nam; Pakistan; Indonesia; Thailand.				
Below 10	Cambodia; Nepal; Afghanistan; Laos.				

In terms of enrolment ratio, all countries have registered a progressive increase - except Thailand which seems to have stabilized at around 13 per cent during the period 1960-1967, and Laos, at two per cent.

Since, in many countries of the region, the two stages of second-level education are clearly distinguishable in terms of curricular programmes and selection procedures, enrolment data should be interpreted with reference to the distribution of enrolment in the two stages. Table A 31 (pages 181-191) presents enrolment data by grade for general secondary education. In this connexion, transition ratios from the first stage to the second stage of second-level education provide useful trend indices. Table A 31 below presents transition ratios at two different points of time for 14 countries of the region.

Table 31. Transition ratios between lower and upper general secondary school, selected countries (percentages)

Country	Transition point between grades*	First period	Ratio	Second period	Ratio
Afghanistan	IX. to X	-	***	1964-66	65
Burma	VII to VIII	1956-59	46	1960-63	68
Cambodia	X to XI	1952-55	53	1961-64	44
Ceylon	VIII to XI	1952-55	8u	1961-64	92
China (Taiwan)	IX to X	1954-57	52	1964-67	47
India	VIII to IX	1950-53	77	1960-63	83
Iran	IX to X	1957-60	83	1962-65	80
Korea, Rep. of	IX to X	1953 - 56	85	1964-67	73
Malaysia	IX to X	1956-59	73	1964-67	62
Pakistan	VIII to IX	1955-58	81	1962-65	86
Philippines	VIII to IX	1950-53	82	1960-63	92
Singapore	X to XI	1954-57	41	1965-67	24
Thailand	X to XI	1957-60	31	1964-67	3 8
Viet-Nam, Rep.	of IX to X	1956-59	50	1961-64	57

^{*} Grades numbered starting from Grade I of primary school.

Comparing this data with the transition ratios at the first level (Table 29), there is noticeable a fair degree of correspondence between the two sets: many countries with a high transition ratio at the first level also have a high transition ratio at the second level.

Education at the second level is generally divided by type into general education, vocational education (including technical) and teacher training. Heavy concentration of enrolment in general education has been an almost traditional feature of the education systems; only in recent years have efforts been made to develop vocational and technical education. In teacher training, there is in evidence a gradual shift to training teachers in institutions at the third level. Some countries, such as the Republic of Korea, the Philippines and Singapore have already abolished regular teacher training institutions at the second level.

Since enrolments by type are not always shown in national statistics, estimates have had to be constructed from the data available from other sources. The data given in Table 32 are therefore to be considered as estimates.

Table 32. Percentage distribution of enrolment at the second level by type of education and sex, Asian region, 1950-67

Year	Sex	Second level	General	Vocational	Teacher training
1950	MF	100	93.1	4.9	2.0
	F	100	92.3	5.6	2.1
1955	MF	100	91.2	6.0	2.8
	F	100	91.7	6.3	2.0
1960	MF	100	92.7	6.0	1.3
	F	100	92.9	5.7	1.4
1965	MF	100	92.4	6.2	1.4
	F	100	91.8	6.9	1.3
1967	MF	100	93.0	5.6	1.4
	F	100	91.9	6.3	1.8

General education, it will be observed, accounts for over 90 per cent of the enrolment at the second level. Despite greater emphasis now given to expanding vocational education, its proportion is still small, about 6.0 per cent. The proportion in teacher training tends to decrease because teachers are increasingly being trained at the third level of education.

Although the share of vocational education has remained small, its enrolment has increased rapidly: in 1967 it was over $4\frac{1}{2}$ times higher than in 1950. The absolute numbers were 372 000 students in 1950 compared with 1 748 000 in 1967. The enrolment index (base 1950-100) presented in Table 33 shows the expansion which took place over the period 1950-67 for each type of education at the second level.

Table 33. Growth in enrolment by type of education at the second level, Asian region, 1950-67 (Index 1950 = 100)

Year	r Total General Second level		Vocational	Teacher training	
1950	100	100	100	100	
1955	1 45	142	179	*200	
1960	225	224	276	1 42	
1965	351	348	446	238	
1967	409	409	469	285	

^{*} Affected by the inclusion of emergency teacher training programmes.

Although the disparity is still wide, the proportion of girls in total enrolment at the second level has increased steadily: 19 per cent in 1950; 22 per cent in 1955; 26 per cent in 1960; 29 per cent in 1965; and 30 per cent in 1967.

Statistics available on teachers by type of education at the second level are in general neither complete nor precise. There are problems of double-counting (as the same person may teach in schools of more than one type), of part-time teachers, and of non-instructional staff. These and other problems tend to affect the degree of precision and comparability of the data over time. The regional estimates in Table 34 may nevertheless be useful as a broad indication of orders of magnitude. Table 34 presents the total number of teachers and per cent of female teachers by type of secondary education.

Table 34. Teaching staff at the second level, by sex and type of education, Asian region, 1950-1967 (in thousands)

Year	Total second level		General		Vocational		Teacher training	
	MF	%F	MF	%F	MF	%F	MF	%F
1950	342	16	3 16	16	18.2	16	8.3	20
1955	542	19	493	19	30.9	18	17.4	14
1960	932	22	858	23	57.0	15	16.7	19
1965	1 289	23	1194	24	72.3	16	22.0	20
1967	1 534	25	1 426		83.6		25.0	• •

In 1967, 93 per cent of the teachers had general education as preparation, 5.4 per cent were prepared in vocational schools, and only 1.6 per cent came from teacher training institutions. From 1950 to 1967 the number of teachers in general and vocational education each increased by over $4\frac{1}{2}$ times, and the number in teacher training by 3 times.

The percentages of female teachers in vocational education and teacher training fluctuate at around 16 and 20 respectively without showing any trends. In the case of general education, the trend is clear: in 1965 one in every four teachers was female, whereas in 1950 only one in every six teachers was female.

The growth in the number of institutions at the second level has kept pace with the increase in enrolment. Unlike the first level, at the second level in some countries of the region, private schools enrol a substantial proportion of pupils. Data on this are given in Table A 14 (pages 107-108). There are some contradictory trends in evidence. In some countries, the share of the private schools in enrolment has been diminishing over the years and the expansion of the education system is taking place mainly in the public sector; e.g., in Cambodia, Ceylon, Iran and Singapore. In other countries, the private sector has been on the increase; e.g., in India, Indonesia, Pakistan, Philippines, Thailand and the Republic of Viet-Nam. In these countries, it accounts for a major share of the total enrolment at the second level.

Third level of education

The rate of increase of enrolment at the third level of education has been higher than at the first and second levels: enrolment increased more than five-fold during the period 1950 to 1967 (from 716 000 students in 1950 to 3 591 000 in 1967). Female enrolment as proportion of the total rose from 15 per cent in 1950 to 27 per cent in 1967.

The enrolment ratio for the third level, expressed in terms of the number of students per 100 000 of total population, shows a rapid increase in all countries. Table 35 gives the figures for the period 1950-1967 for the three Groups of countries and the region. The table also serves to highlight the fact that the educational distance between the Groups of countries, so far as the third level of education is concerned, has been increasing instead of narrowing. Along with the expanding enrolments, the institutional structure itself has been undergoing considerable expansion. All countries in the region, except one (Laos) have their own Universities. Apart from the Universities, new types of institutions are being established - Technical Colleges, Junior Colleges, Research Institutes, etc. Table A 25 (pages 143-146) sets out data on the number of institutions as well as their types.

Table 35. Number of students at the third level (per 100 000 of total population)

Year	Group A	Group B	Group C	Whole Region
1950	3	89	270	109
1955	8	133	374	160
1960	27	204	45 0	232
1965	44	261	6 30	306
1967	61	3 19	752	364

Distribution of enrolment by fields of study (Tables A 16 and A 17, pages 113-122) shows that a heavy concentration in the Humanities and related subjects continues. In all countries, the percentage of students studying the Humanities and related subjects has increased. There have, however, been important gains in enrolment in the fields of

science and technology. Table 36 shows the number of science/technology students per 100 000 of total population for the three Groups and the region. It will be observed that, although gains have been made in enrolments, the increase has not been commensurate with the increase in the total enrolment at the third level.

Table 36. Number of Science/Technological Students at the third level (per 100 000 of total population)

Year	Group A	Group B	Group C	Whole Region
1960	1	67	1 29	74
1965	1 2	84	161	92

Taking the region as a whole, it would appear that the supply of teachers for third-level education has kept pace with increasing enrolment. The picture becomes modified, however, when Groups of countries are examined individually. In countries of Group A, the student/teacher ratio increased from 8 in 1950 to 9 in 1965. In countries in Group B, it increased from 17 in 1950 to 19 in 1965, indicating that in Group B countries the enrolments have moved faster than the supply of teachers. In Group C, the student/teacher ratio has decreased, declining from 25 in 1950 to 19 in 1965.

The basic weakness in the institutional structure at the third level, which also affects the supply of teachers, appears to be the slow development of post-graduate education.

ERIC

Expenditure on education

The limitations of the statistical data relating to educational expenditure are such that it is found justifiable to open this section with a caveat. The limitations refer not only to the quality of the data, but also to their coverage and classification. Private expenditure on which data are often lacking is difficult to assess, and its incidence by level of education and its weight in total educational expenditure vary considerably between countries. The data on Government expenditure may refer to the Ministry of Education only, thus leaving out other Ministries, and local bodies and institutions which may be spending important sums on education. These limitations must be borne in mind in interpreting the data presented in the review.

Around 1965, total public expenditure on education for the region as a whole was roughly U.S. \$2 500 million, which represents approximately 2.6 per cent of the aggregate national income of the countries concerned. For the individual countries, in the same year, public expenditure on education ranged from less than 1 per cent to over 5 per cent of the national income. The distribution of 11 countries, for which comparable data are available for both 1960 and 1965, is given in Table 37.

Table 37. Public expenditure on education as percentage of national income, eleven countries, 1960 and 1965

Public expenditure	on ed	ucat	ion a	.s		Number of	countries
percentage of nat	ional	inco	me			1960	1965
l% or less	•		•	•	•	1	_
1.1 to 2.0%				•		3	1
2.1 to 3.0%	•	•	•	•	•	4	2
3.1 to 4.0%	•	•	•	•	•	1	4
4.1 to 5.0%	•	•	•	•	•	1	3
Over 5%	•	•	•	•	•	1	1
						11	11

It is clear from Table 37 that countries are devoting to education an increasing proportion of their national resources. In 1960, eight of the 11 countries were spending 3.0% or less whereas, in 1965, the majority of them were in the 3.1% to 5% group. Per capita, the region was spending on education less than U.S. \$1 in 1955, \$1.8 in 1962 and about \$2.5 in 1965.

The total expenditure on education comprises expenditure from public revenues and private institutions, apart from expenditures met by

parents for textbooks etc. The role of private institutions varies from country-to-country in the region and from one level to another. At the first level of education, private institutions, compared to public institutions, have relatively a small share in all countries; at the second level, private institutions in some countries have almost a dominant position. At the third level, the number of countries where the private sector has a major share is fewer than in the case of second level education. In countries where the private sector has a large share in the educational effort, expenditure for such private education is also substantial. By way of illustration, Table 38 presents, for a few countries for which relevant data are available, public and total expenditures on education.

Table 38. Public and Private expenditure on education as percentage of national income, selected countries, around 1965

Country	Public expenditure only	Total expenditure
China (Taiwan)	3.4	4.2
India	2,1	2.6
Korea, Rep. of		3.3
Philippines	3.0	6,2
Viet-Nam, Rep. of	2.2	3.3

The share of education in total public expenditure varies, ranging from less than 12 per cent to over 25 per cent. The distribution of 15 countries is given in Table 39 relating public expenditure on education with total government expenditure and with national income in 1965.

Table 39. Public expenditure on education in relation to total public expenditure and national income in 1965

Proportion of total	I	Relation to nat	tional income	
public expenditure	Less than 1.5%	1.5 to 3.0%	3.1 to 4.0%	4.1 to 5.0%

12 to 16.9%		Pakistan	Burma China (Taiwan) Iran	Malaysia
17 to 25.0%			Korea, Rep. of Thailand	Ceylon Singapore Cambodia
More than 25%				Philippines (in 1964)

The preceding sections of this review drew attention to the magnitude of educational expansion which has taken place in the region during the period 1950-67. An attempt is made in Table 40 to relate enrolment growth to the financial support for education in the countries concerned.

Table 40. Enrolment at all levels as percentage of total population and public expenditure on education as percentage of national income, selected countries, 1950-1967

Country	Year	Percentage of total population enrolled (a)	Public expenditure on education as percentage of national income (b)	Ratio A = (a)/(b)

¹ Including private expenditure relating to private education.

² As percentage of gross domestic product at market prices.

The steady increase in the proportion of total population enrolled, other things being equal, is likely to lead to an increase in the proportion of national income spent on education. The ratio A in the third column of Table 40 gives an indication of the relative change between the percentage of population enrolled and the percentage of national income spent on education. An increase in ratio A will indicate a higher rate of increase for enrolment than for expenditure, and a decrease in A will be the result of a higher increase in the proportion of expenditure than in the proportion enrolled. A reference to this Table will show that ratio A was increasing in the earlier period in all countries in the region except India and Pakistan. But most countries shown in the Table have a decrease of A in the later years. This indicated a higher proportionate increase in the financial support from public resources than the increase in the enrolment ratio. Unit expenditure on education must have increased, therefore, not only within each type of education but also for the educational system as a whole. This is to be expected because of the prevailing trend towards greater expansion at the second and third levels, in particular in the expensive science and technology streams.

In all countries of the region for which data are available, a major part of the total public recurring expenditure is taken by teachers' salaries. Of ten countries for which the data are given for 1965 (see Table A 27, page 152), teachers' salaries accounted for over 80% of the recurring expenditure in five countries, for between 67 and 80% in three countries, and for between 50 and 60% in two countries.

In beginning a discussion on unit recurring expenditure where figures are given in a single currency, an important consideration must be cited. To make possible any comparison of educational expenditures which were made in different national currencies, rates of exchange must be applied. Since by far the major part of the national expenditure on education is spent domestically, the difference in purchasing power of the dollar equivalent between various countries will affect the inter-country comparison. In other words, the same amount in dollars spent in different countries does not necessarily represent the same combination of quantity and quality in services and goods.

Unit recurring expenditure at the first, second and third levels varies considerably, particularly when viewed in terms of U.S. dollars. Table 41 attempts to illustrate this variation for selected countries by ranking the countries with respect to unit expenditure at each level.

Table 41. Unit recurring expenditure on public education by level, selected countries, around 1965, in U.S. Dollars

Country	First level	Rank	Second level	Rank	Third level	Rank
Singapore	60	1	78	3	766	2
Malaysia, West	44	2	82	2	1146	1
Cambodia	26	3	111	1	212	5
Viet-Nam, Rep. of	19	4	75	4	273	3
Thailand	13	5	60	5	232	4
China, Rep. of	12	6	43	6	197	6
Pakistan	6.7	7	18	7	59	9
Korea, Rep. of	6.6	8	17	8	1 43	8
India	6.5	9	13	9	181	7

Unit recurring expenditure at the first level varies greatly, from US \$6.5 (India) to \$60 (Singapore); at the second level, from \$13 (India) to \$111 (Cambodia); and at the third level, from \$59 (Pakistan) to \$1146 (Malaysia). Quite as striking in its range is the ratio of unit costs for different levels of education. By way of illustration, the ratios of unit costs for the first, second and third levels are shown in the following statement for five countries: India (the lowest unit costs at the first and second levels), Singapore (the highest unit cost at the first level), Cambodia (the highest unit cost at the third level) and Malaysia (the highest unit cost at the third level).

	Inter-level ratios of unit costs							
	lst level	:	2nd level	:	3rd level			
India	1	:	2	:	27			
Singapore	1	:	1.3	:	12.8			
Cambodia	1	:	4.3	:	8			
Pakistan	1	:	2.7	:	8.8			
Malaysia	1	:	1.9	:	26			

Table 42 on page 50 gives an illustration of the annual financial input effort per pupil, by levels, expressed as percentage of per capita national income.

Table 42. National income per capita and unit recurring expenditure on public education as % of it, by level, selected countries around 1965, in U.S. dollars

Country	National income			_	expenditue of per c	_		
	per capita	Rank	First level	Rank	Second level	Rank	Third level	Rank
Japan	694	1	16.8	3	18.4	7	148.8	7
Singapore	508	2	11.8	6	15.3	9	150.7	6
Malaysia, (West Malay- sia only)	253	3	17,2	2	32.6	4	453.2	1
China, Rep. of	185	4	6.3	9	23.1	5	106.7	9
Viet-Nam, Rep. of	117	5	16.0	4	63.8	2	233.7	2
Cambodia	112	6	23.1	1	98.8	l	189.6	4
Thailand	109	7	12.3	5	55.3	3	213.3	3
Korea, Rep. of	102	8	6.5	8	16.8	8	140.1	8
Pakistan	95	9	7.1	7	18.8	6	62.1	10
India	91	10	7,1	7	13.6	10	179.3	5

Productivity is usually defined as output ::input. An attempt to classify some Asian countries (for which data are available) with regard to productivity in primary education may be made by using the retention ratio as a tentative indicator for the output, and the unit expenditure as percentage of per capita income as a possible indicator for the input. On this basis (see footnote 1/ on page 51), the picture would appear as follows:

- 1. High in the Republic of China and the Republic of Korea (large output: small input);
- 2. Medium in Japan, Malaysia and Singapore (large output: large input);
- 3. Medium in India and Pakistan (small output: small input);
- 4. Low in Cambodia, Thailand and the Republic of Viet-Nam (small output: large input) 1/.

Table A 28 (pages 157-159) gives the distribution of public expenditure on education by level and main purpose for individual countries. Since the budgetary classification of public expenditure in most countries does not always mark out clearly the levels or main purposes of expenditure allocation, the data on expenditure must be interpreted with caution. Table A 28 does however present a broad picture which reflects the priorities in educational development as the national authorities view them from time to time. In almost all countries, allocations for the second and third levels of education show a marked rising trend. Allocations for the first level, although showing a declining trend, still form a substantial proportion of total educational expenditure in most countries and in all Groups. For example, of 14 countries for which data are available, the allocations for the first level in 8 countries (and they are to be found in all Groups) are well above 50 per cent of the total educational expenditure.

Increases in the allocations for the second level have gone mainly into general secondary education. Vocational and technical education has gained but not to an extent that would reflect a fundamental change in the pattern of secondary education. The Asian Model 2/ envisaged that, by 1970, recurrent allocations for the second level s a whole would reach about 34 per cent, and second-level vocational and technical education about 6 per cent of the total recurrent educational expenditure. While most countries are now approaching the target of 34 per cent for second-level education, present trends indicate that allocations for vocational and technical education are falling short of the mark. The actual expenditures are given in Table A 29 on pages 160-166.

Beginning on page 52, statistics on enrolment for the region as a whole and for Groups A, B, and C are delineated graphically in a series of six charts. These graphic representations summarize the educational picture for the Asian region as it appeared in 1967. Statistical details are then presented in Part II which begins on page 59.

^{1/} It has to be borne in mind, however, that the retention ratio gives a limited picture of the output, as it is only quantitative and does not express the differences in quality of primary education in various countries. This analysis, therefore, cannot be applied to compare educational productivity in countries where the retention ratio is approaching 100% and in which there is a probable difference in the quality of education. The conclusions of the analysis should therefore be interpreted taking into account the definitions of output and input used here.

STATISTICAL TABLES

Introductory Note

Part II of the Review consists of thirty-one tables giving statistical information on population, area, illiteracy, educational attainment, enrolment, teaching staff, educational institutions and educational expenditure.

The data have been gathered from official national publications and other documents, notably the Unesco Statistical Yearbook, and United Nations publications. Specific references to sources have been noted at the bottom of certain tables. (A selected list of documents containing educational statistics forms Part III of the Review).

In case of conflicting data from different sources, the data given in official publications, if available, have been used. Where data reported earlier for some previous years are found to be different from the data subsequently acquired for the same item, the later data have been used. The data have to be interpreted bearing in mind the limitations imposed by a lack of uniformity in the concepts, definitions, classifications and reporting procedures used by the different countries.

As far as possible, school statistics are given for the school years(fiscal year for educational expenditure), beginning in 1950, 1955, 1960, 1965, 1966, and 1967. Grade enrolment data are presented, as far as possible, for every school year over the period 1950-67.

Owing to rounding off, the totals shown in the tables do not always correspond exactly to the sums of their component items.

The regional totals, wherever they occur, include only eighteen countries of the Asian region; namely, Afghanistan, Burma, Cambodia, Ceylon, Republic of China, India, Indonesia, Iran, Republic of Korea, Laos, Malaysia, Mongolia, Nepal, Pakistan, Philippines, Singapore, Thailand and Republic of Viet-Nam.

The following extracts from the Unesco Recommendation concerning the International Standardization of Educational Statistics, adopted in 1958 are relevant to the classification by levels and type of education used in this Review.

- "12. Education should be classified as far as possible by level as follows:
- Education preceding the first level, which provides education for children who are not old enough to enter a school at the first level (e.g., at nursery school, kindergarten, infant school).
- (b) Education at the first level, of which the main function is to provide basic instruction in the tools of learning (e.g., at elementary school, primary school).
- (c) Education at the second level, based upon at least four years' previous instruction at the first level, and providing general or specialized instruction, or both (e.g., at middle school, secondary school, high school, vocational school, teacher-training school at this level).
- Education at the third level, which requires, as a minimum condition of admission, the successful completion of education at the second level, or evidence of the attainment of an equivalent level of knowledge (e.g., at university, teachers college, higher professional school).
- 14. Where possible, education of the second level should be subdivided by type as follows:
- (a) General education, which does not aim at preparing the pupils directly for a given trade or occupation.
- (b) Vocational education, which aims at preparing the pupils directly for a trade or occupation other than teaching.

The following symbols are used:

- Magnitude nil or negligible
- 0 Magnitude less than half of unit employed
- ... Data not available
- . Category not applicable
- * Provisional or estimated data

Summary statistics for the Asian region: population, illiteracy, enrolment, teachers, schools

The data presented in this table, except for population (see below) are aggregates, or based on aggregates, of the data relating to and relevant country tables, in particular: Table A 4 on illiteracy; Tables A 7 and A 8 on enrolment; Tables A 20 and A 21 on teachers; Table A 24 on schools; and Table A 30 on grade enrolment. When necessary, country data have been supplemented with Unesconstimates for missing information. Owing to insufficient data, the distribution of enrolment and teachers by type of education at the second level, as well as the percentage of female teachers by level, are largely based on estimates and are given only to indicate broad orders of magnitude. It should further be noted that the school data provided in this table refer only to the first, second and third levels of education. The data do not cover, therefore, pre-school, special and adult education. All school statistics refer to the school-year begun in the calendar cated. years indi

Population data presented under section A 1.1 are aggregates of the country estimates prepared for use in connexion with An Asian Model of Education Development published by Unesco in 1966. The Asian region for the purpose of Table A 1 is composed of the eighteen countries listed in the Introductory Note to the Statistical Tables.

A 1.1 Estimated total population and population 5-24 years old, and annual rate of increase, 1950-80

Population figures are national official estimates of mid-year population, supplemented in some cases by United Nations estimates. For detailed descriptions of the series and their limitations, see the 1967 Supplement to the Statistical Yearbook and the Monthly Bulletin of Statistics of the United Nations. The actual data shown in this Table have been obtained from the Demographic Yearbook and the Monthly Bulletin of Statistics, both United Nations publications. Note.

1949-1955.

4. 1949.

Figure not comparable with those in later years. 2.

Excluding armed forces and foreigners.

Excluding West Irian (Mid-year population 820 000 in 1967).

A 3. Percentage distribution of the population by specified age proups, 1960 and 1980

- A 4. Illiterate population and percentage of illiteracy in the population 15 years of age and over, by sex, last two censuses since 1945 (continued)
- Note. In this table, as well as in Table A5, ability to both read and write is used as the criterion of literacy; hence all semi-literates persons who can read but not write are included with illiterates. Persons unspecified for literacy are excluded from calculations. For further details on these data see the Unesco Statistical Yearbook (1965 and 1967 editions), and the United Nations Demographic Yearbook (1963 and 1964 editions). For a methodological discussion on the subject, the reader is referred to Unesco publications World Illiteracy at Mid-Century (Paris, 1957) and Statistics of Illiteracy (see Note 1 below).
- 1. Official or Unesco estimates published in Statistics of Illiteracy. Report prepared for the World Conference of Ministers of Education on the Eradication of Illiteracy, Teheran, 8-19 September 1965. Unesco, August 1965.
- 2. Population 16 years of age and over.
- 3. Population in 252 towns only, approximating the urban areas in the Union.
- 4. Population in 2 131 village tracts.
- 5. Based on a sample survey.
- 6. Based on a 10% sample of census returns.
- 7. Excluding Sikkim and North East Frontier Agency. Including Kashmir-Jammu and Goa,
 Daman and Diu.
- 8. Excluding West Irian. Data based on a 1% sample of census returns.
- 9. Illiteracy defined as "never attended school".
- 10. Based on a 20% sample of census returns.
- 11. Excluding data for Frontier Regions of West Pakistan (population 3 437 939; of which 1 791 755 males and 1 646 184 females), 111 369 foreigners (64 824 males; 46 545 females), and probably also a considerable number of nomads.

A 5. Number of illiterates and illiteracy rates in the population 10 years of age and over, by sex and age groups, latest census or estimate available

- Note. This Table gives, wherever possible, the number of illiterates and illiteracy rates for the population aged 10 years and over classified by sex and age in the following groups: 10-14, 15-19, 20-24, 25-34, 35-44, 45-54, 55-64, 65 years and over, as set forth in the Unesco recommendation concerning the international standardization of educational statistics. The Note to Table A4 should be consulted for additional details on these data.
 - 1. Official or Unesco estimate (see footnote 1 to Table A4).
 - 2. Population in 252 towns only, approximating the urban areas in the Union.
 - 3. Population in 2 131 village tracts.
 - 4. Excluding Sikkim and North East Frontier Agency. Including Kashmir-Jammu and Goa, Daman and Diu.
 - 5. Excluding West Irian. Data are based on a 1% sample of census returns.
 - 6. Illiteracy defined as "never attended school".
 - 7. Data are based on a 20 per cent sample of census returns. Age classification based on year of birth rather than on completed years of age.
 - 8. Illiteracy defined as inability both to read and write a simple letter in any language.
 - 9. Excluding data for Frontier Regions of West Pakistan (population 3 437 939; of which 1 791 755 males and 1 646 184 females); 111 369 foreigners (64 824 males; 46 545 females), and probably also a considerable number of nomads.

A 6. Percentage distribution of the population 25 years and over by educational attainment and sex, based on censuses or surveys since 1945

The term educational attainment is used to signify the highest level of education completed by a person in the educational system of his own country or of some other country. For further details regarding the classification used, see footnotes 1 to 4. Note.

It should be noted that "Total population 25 years and over" includes also the category of "unknown", i.e., persons whose educational attainment is not specified, while that category, unless otherwise noted, has been excluded in calculating the percentages. Countries with a high percentage of "unknown" have not been presented.

- In general, persons having completed less than 4 years at the first level of education, including illiterates and persons without formal schooling.
- In general, persons having completed 4 years or more at the first level of education, but less than 4 years at the second level.

Percentage distribution of the population 25 years and over by educational attainment and sex, based on censuses or surveys since 1945 (continued) A 6.

- general, persons having completed 4 years or more at the second level of education, but less than 4 years at the
- general, persons having completed 4 years or more at the third level of education.
- ese figures refer to persons having completed respectively: 0-4; 5-10; 10 or more years of schooling. 8 .. 6 .. 8
- ta refer respectively to: persons with no schooling, or having completed less than 3 years of schooling; 5-7 years of schooling, 8 years of schooling, and persons with a senior school certificate or who have completed an unstated number of years in intermediate schools; persons with technical qualifications, a degree or a post-graduate degree. Estimates based on a 20 per cent sub-sample of the population of 252 towns.

 These figures refer to persons having completed respectively: 0-4; 5-10; 10 or more year Estimates based on a 20 per cent sub-sample of the population of 2 131 village areas. Data refer respectively to: persons with no schooling, or having completed less than 5 y
- ese figures refer respectively to: illiterate persons; persons having completed an unstated number of years in primary or junior middle school; in senior middle school; and in college and university. 9
- cluding Kashmir-Jammu and tribal areas of Assam. 10. 11. 12.
- ese figures refer respectively to persons having completed an unstated number of years below middle school standard, including illiterates; in middle school; in higher secondary school or intermediate college in arts and sciences; in higher education. A1 Ex Th
- Including data for the Indian-held part of Kashmir-Jammu, Sikkim and an estimate (626 667) for Goa, Danan and Diu. Excluding part of North East Frontier Agency (Population 297 853 of which 150 753 females). 13.
- Data by level of education are persons classified according to highest level completed and refer respectively to persons with no schooling and those not having completed primary education; those having completed primary education (usually 4-6 years); having passed the matriculation level and above. 14.
- 15. 16.
- ese figures refer respectively to: persons with no schooling or having completed less than 3 years of primary education; 3 years or more of primary and persons having completed junior high school; persons having completed senior high school; persons having completed university and academy. Excluding West Irian.

 Based on 1 per cent sample of census returns.

 These figures refer respectively to: persons
- ta refer respectively to: persons having completed 4 years or more of secondary education; an unstated number of years of higher education. 18.

Percentage distribution of the population 25 years and over by educational attainment and sex, based on censuses or surveys since 1945 (continued) A 6.

- These figures refer respectively to: persons without schooling; persons having completed an unstated number of years in elementary, higher elementary and junior high school; in youth training school, middle school and senior high school; and in junior college and university.
 - These figures refer respectively to: persons without schooling or less than one year; persons having completed an unstated number of years in primary; in secondary; and in higher education. 20.
- dependants. Data are based on a 20 per cent sample of census returns. Age classification based on Korean system of measuring age (i.e. not converted to Western age) and based on year of birth rather than on completed years of age. Data by level of education are persons classified by total number of years of schooling. Excluding alien armed forces, civilian aliens employed by armed forces, and foreign diplomatic personnel and their
- West Malaysia only
- These figures refer to persons having completed respectively: 4-9; 10-11; 12 or more years of schooling.
- ಡ middle schools; in secondary and intermediate schools, and persons with a school-leaving certificate; persons with Data refer respectively to: persons with no schooling; having completed an unstated number of years in primary and higher diploma. 22 23 23 25 25 25 26.
 - Excluding data for a part of Kashmir-Jammu, for Frontier Regions of West Pakistan, foreigners and probably nomads.
- persons who have received formal education, such as private tutoring, without attending any educational institution. Data refer, in addition to persons with no schooling or having completed less than 4 years of primary education, to
- Data refer respectively to persons having completed 4 years or more of secondary education, person having passed the matriculation and the intermediate examination; with university diploma or degree, or persons having passed the higher standards in theology and/or oriental languages. 27.
- 10 years of age and over.
- Including persons having completed an unstated number of years respectively: in primary; secondary; and higher education.
- Including persons whose educational attainment is not specified ("unknown").

On the other hand, "vocational" includes various part-time courses, sometimes of very short duration. are given in the Introductory Note to the Statistical Tables at the beginning of this chapter. This table does not cover special education, i.e., schools and classes organized for handicapped children; nor data referring to adult education, literacy classes and other education not classifiable by levels. Evening schools and correspondence courses have been excluded whenever this is feasible. At the second level, "general" may include some "vocational" It may be noted that some countries have discontinued teacher training at the second level to replace it by teacher degree-granting and non-degree granting institutions of higher education of all types (universities, higher technieducation since a number of schools in certain countries offer courses combining the academic and vocational types Unless otherwise stated, enrolment data in this table relate to both public and private schools, and to the school-years begun in the calendar years indicated. The definitions of levels and types of education used in this table training at the third level. Enrolment figures at the third level concern all institutions at this level, i.e., cal schools, teacher-training colleges, theological schools, etc.), including part-time students but excluding auditors. The chief sources of lata presented are official publications from the countries concerned and the Unesco Statistical Yearbook. of education.

Note. Total enrolment/all levels in this table refers to the aggregate enrolment of the first, second and third levels of education (i.e., excluding pre-school, special and adult education). In some cases the figures are estimates made from the available data. Official estimates of mid-year population have been used in calculating the percentages. The aim of this table is to show the increasing proportion of population which is enrolled in school. Inter-country comparisons of the percentage enrolled will not be valid unless due account is taken of differences in the national school systems and in the age structure of the population.

^{2.} Excluding enrolment at the third level of education.

^{1.} Excluding vocational and teacher training at the second level of education.

ERIC.

School enrolment ratios for the first, second and third levels of education, 1950, 1955, 1960, 1965-67 (continued) A 10.

age groups
VI-XII 11-17

The school enrolment ratios for the first and second levels of education presented in this table are percentage ratios based on the enrolment in the grades, and the estimated population of the age groups, which have been indicated in the respective columns of the table (Roman numbers denoting grades, Arabic numbers denoting the age group). Enrolment at the second level refers to all types of schools at this level (general, vocational, technical, and teacher training). The estimates of population used in the calculation of the ratios are those prepared in connexion with the work for An Asian Model of educational development published by Unesco in 1966. Note.

The data presented in this table are only intended to provide a rough indication of progress achieved in the various countries with regard to the proportion of the school-age population which is being absorbed by the national educational systems. In interpreting the ratios it is important to note that, in a majority of the countries, there is no exact correspondence between the age ranges of the pupils enrolled and the age group used for the comparison; i.e., a proportion of the pupils are either below or above the age group indicated. Because data on enrolment, cross-classified by age and grade, are nearly unavailable in the form required, it is not possible to calculate more precise enrolment ratios. The inconsistency thereby introduced tends to overstate the level of the ratio achieved, and leads to ratios of over 100 per cent in certain cases. Differences in the national educational systems as well as in the degree of comparability of the basic data should be taken into account in making inter-country comparisons of the enrol-

Note. "General" may include some vocational education since a number of schools in certain countries offer courses combining the academic and vocational types of education. It may also be noted that some countries have discontinued teacher training at the second level to replace it by teacher training at the third level of education.

total number enrolled in Grade II in the following year, and so on through the school cycle. For Afghanistan, for example, data correspond to total enrolment in grade I (1962); grade II (1963): grade III (1964); grade IV (1965); grade VI (1967). The inclusion of repeaters, re-entrants, and other categories, and probably some lack of comparability in the coverage of the enrolment data, lead to retention ratios of over 100 per cent in certain cases. For greater detail on this subject the reader may consult: The Problem of Educational Wastage, Bulletin of the Unesco Regional Office for Education in Asia, Vol. I, Number 2, March 1967, (out of print). In this table, the term "cohort" refers to the total number of children enrolled in Grade I in the year indicated, the

Public education only. 5. G = girls.boys and girls; 3 = boys;

Unesco Statistical Yearbook, 1967 (Paris 1968); and official national publications. Source: This table gives the number of students, by sex, enrolled in higher educational institutions (public and private), by fields of study. The subjects falling within each field of study according to the classification used by Unesco are enumerated at the end of this

In principle, the data presented here refer only to students eligible to take examinations and to receive degrees or diplomas; this would exclude auditors, for example. Equally excluded are students by correspondence and those enrolled in classes which, although attached to higher educational institutions, offer courses at other levels, or specially designed for adults. Part-time students (evening courses) are included.

Whenever the nature of Precise statistics by field of study are, of course, less readily available than global enrolment figures. For this reason, the the difference in coverage or any other divergence is known to the Secretariat, it is explained in a footnote. coverage in this table is less complete than in Table A 7 and the totals will not in all cases be the same.

education, pedagogy (including subjects studied in teacher-training institutions at the third level), physical education. archaeology, history, languages, letters, library science, philosophy, psychology, theology and similar subjects. Humanities: Education:

architecture, drawing, music, painting, sculpture, speech and dramatic arts, and similar subjects. Fine arts:

Гам.

Social sciences: banking, commerce, diplomacy, economics, ethnology, geography, home economics, international relations, journalism, political science, public administration, social welfare, sociology, statistics and similar subjects.

distribution of enrolment by field of study, around 1950, 1955, 1960, 1965-1967 (continued) Education at the third level: astronomy, bacteriology, biochemistry, biology, botany, chemistry, entomology, geology, geophysics, mathematics, meteorology, mineralogy, physics, zoology, and similar subjects. Natural sciences:

and anatomy, dentistry, medicine, midwifery, nursing, optometry, osteopathy, pharmacy, physiotherapy, public health, applied science, construction, geodesy, metallurgy, mining, surveying, technology, textiles, and similar subjects. similar subjects. Engineering: appl

dairying, fisheries, forestry, horticulture, rural science, veterinary medicine, and similar subjects.

- Social sciences are included with Law
- Data for the University of Rangoon and some colleges which are associated with it.
- Social sciences are included with Humanities.
- Not including either the Law College or the Ceylon Technical College.
- Including Intermediate Colleges.
- Natural sciences are included with Humanities.
- Separate data are not available for Fine arts.
- Veterinary science is included with Medical Sciences.
- Education is included with Humanities.
- Geography and Sociology are included with Humanities.
- Separate data are not available for Law.
- Social sciences are included with Law.
- Not including Intermediate Colleges which, prior to 1962/63 constituted the lower stage of education at the third level but which now constitute the upper stage of education at the second level. In 1962/63, there were 124 674 (F 17 100) students enrolled in Intermediate Colleges. Agriculture:

Note. The percentage distribution of enrolment by broad fields of study presented in this table is based on the data contained in table A 16.

- 1, Data for the University of Rangoon and some colleges which are associated with it.
- 2. Not including either the Law College or the Ceylon Technical College.
- 3. Including Intermediate Colleges.
- 4. Natural sciences are included with Humanities.
- 5. Not including Intermediate Colleges.
- 6. Not including either the University of the Philippines or the Public Chartered Colleges.
- 7. Universities and degree-granting institutions only.

A 18. Education at the third level: Distribution of graduates by field of study, around 1950, 1955, 1960, 1965-1967

Unesco Statistical Yearbook 1967 (Paris, 1968); and official national publications.

For the subjects included in the various fields of stuay, see note to table A 16.

- Kabul University only
 Universities only.
 Not including Intermediate Colleges.
 Not including data for the subjects indicated by three dots (...).
 Natural sciences are included with Humanities.
 Data refer to first degrees only.
- ta refer to first degrees only.

- Data refer to West Malaysia only.
- Social sciences are included with Humanities. 8.
- Commerce and home economics and, business administration are shown in social sciences. Other social sciences are included with Humanities.
- Not including public universities and equivalent-degreegranting institutions. 10.

Note. In general, data in this table relate to both public and private schools, covering both full-time and part-time teachers but excluding other instructional personnel without teaching functions (e.g., certain principals, librarians, guidance personnel, etc.). This table does not cover special education; i.e., schools and classes organized for handicapped children; nor data referring to pre-school education, adult education, literacy classes and other education not classifiable by levels. The definitions of levels and types of education used in this table are given in the Introductory Note to the Statistical Tables at the beginning of this chapter. The chief sources of data presented are official publications from the countries concerned and the Unesco Statistical Yearbook.

- *1*. 1951.
- 2. 1962.
- *3*. 1954.
- 4. 1963.
- 5. Public education only.
- 6. 1961.

- 7. 1964.
- 8. West Malaysian only.
- 9. 1957.
- 10. 1st level: grades I-IV; 2nd level-general: grades V-XII
- 11. Not including teachers in Demonstration Schools.
- 12. Full time university teachers only.

A 27. Total public expenditure on education, 1950, 1955, 1960, 1965-1967 (at current market prices) (continued)

Unesco Statistical Yearbook (draft tables for 1968 edition) and official publications. Source:

- The exchange rates shown are at par value unless otherwise indicated. For deviations the following code has been used:
- Free rate;
- (E) Basic rate; (B) Official buying rate;

(C) Selling rate;

Principal export rates;

- (F) Principal selling rate.
- In a number of countries private expenditure on education is very considerable. For those countries for which data are available, public and private expenditure on education as percentage of the national income is given below for selected years:

1966	4.4	:	7.3	3.7	:	:
1965	4.2	:	7.3	3.3	:	3.3
1964	3.6	2.6	7.0	3.6	÷	:
1963	3.7	2.7	6.9	÷	:	3.7
1962	3.9	2.9	9.9	5.8	:	:
1960	÷	2.5	:	:	6.2	:
Country	China (Taiwan)	India	Japan	Korea, Republic of	Philippines	Viet-Nam, Republic of

- Ministry of Education only.
- As percentage of gross domestic product at market prices.
- Central or Federal Government only.
- Not including expenditures on the third level of education.
- Including private expenditures relating to private education.
- As percentage of gross national product at factor costs.
- Expenditure on public education only.
- Not including expenditures relating to state colleges and universities.

Note.

Grade-sex enrolment data for the first level of education are presented in this table, and for general education at the second level in Table A 31.

The grade-enrolment distribution is presented according to the national systems of education of the countries concerned. In particular, it should be noted that the structure of educational systems by levels and stages of education, and duration of schooling, vary from country. In interpreting the data, therefore, tables A 30 and A 31 should preferably be considered together.

The original intent was to present grade-sex-enrolment data year-by-year for the period 1950 to 1967, for every country of the Asian region. Unavailability of part of the data prevented a complete adherence to this norm. In particular, it will be noted that these tables do not include grade-enrolment data in respect of vocational and technical education, and teacher training at the second level. This limitation as well as differences in the structure of the education, and teacher training at the using these data for the calculation of, for example, retention and transition ratios.

The sources of data are official national publications and information supplied directly by the countries concerned to the Unesco Regional Office for Education in Asia.

- Excluding village schools.
- Burma Proper only.
- Public education only.

- Grade distribution: IA, IB, II, III, IV, V respectively. 4
- Data refer to West Malaysia only ŗ,
